WEL (Great Britain)	Long-term value: 10 mg/m ³
---------------------	---------------------------------------

· DNELs

56-81-5 glycerol

Oral	DNEL (consumer, long-term, systemic)	229 mg/kg bw/day (human)
Inhalative	DNEL (worker, long-term, local)	56 mg/m ³ (human)
	DNEL (consumer, short-term, local)	33 mg/m ³ (human)

- **Additional information:** The lists that were valid during the compilation were used as basis.

- **8.2 Exposure controls**
 - **Individual protection measures, such as personal protective equipment**
 - **General protective and hygienic measures**
 - Wash hands during breaks and at the end of the work.
 - **Breathing equipment:**
 - Not required when used as intended.
 - Use a breathing protection if high concentrations are present.
 - **Hand protection**
 - Use gloves of stable material (i.e. nitril rubber).
 - The glove material has to be impermeable and resistant to the product/ the substance/ the preparation.
 - Due to missing tests no recommendation to the glove material can be given for the product/ the preparation/ the chemical mixture.
 - Selection of the glove material on consideration of the penetration times, rates of diffusion and the degradation
 - **Material of gloves**
 - The selection of the suitable gloves does not only depend on the material, but also on further marks of quality and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application.
 - **Penetration time of glove material**
 - In case of a layer thickness of 0.11 mm the penetration time is longer than 480 minutes.
 - The exact break through time has to be found out by the manufacturer of the protective gloves and has to be observed.
 - **For the permanent contact in work areas without heightened risk of injury (e.g. Laboratory) gloves made of the following material are suitable:**
 - Nitrile rubber, NBR
